**DETAILED ACTION*****Priority***

1. Receipt is acknowledged of a certified copy of the European application referred to in the oath or declaration or in an application data sheet. If this copy is being filed to obtain the benefits of the foreign filing date under 35 U.S.C. 119(a)-(d), applicant should also file a claim for such priority as required by 35 U.S.C. 119(b). If the application being examined is an original application filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, the claim for priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. See 37 CFR 1.55(a)(1)(i). If the application being examined has entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and Regulations of the PCT. See 37 CFR 1.55(a)(1)(ii). Any claim for priority under 35 U.S.C. 119(a)-(d) or (f) or 365(a) or (b) not presented within the time period set forth in 37 CFR 1.55(a)(1) is considered to have been waived. If a claim for foreign priority is presented after the time period set forth in 37 CFR 1.55(a)(1), the claim may be accepted if the claim properly identifies the prior foreign application and is accompanied by a grantable petition to accept an unintentionally delayed claim for priority. See 37 CFR 1.55(c).

***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 17 March 2004 has been considered by the examiner.

***Response to Amendment***

3. The preliminary amendment filed on 17 March 2003 has been entered.

***Drawings***

4. The drawings are objected to because in Fig.5, a reference numeral "4" denoting a counter electrode layer actually points to the electrode layer, denoted by reference numeral "6". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

Art Unit: 2834

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

5. Claims 8-9, 11 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 8-9, 11, “before or after each capacitor element or each capacitive element in series” is vague and indefinite.

In claim 17, use of the parentheses makes the claim indefinite since it is not clear whether this means a single disk, a plural disk or both single and plural disks.

***Allowable Subject Matter***

6. Claims 1-7, 10, 12-16 and 18 are allowed. Dependent claims 8-9, 11 and 17 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. The prior art does not teach or suggest the claimed small motor commutator including, inter alia, a capacitor ring disk comprising a dielectric first ring disk on whose upper side several sector-shaped electrode layers are positioned, each of the electrode layers electrically conductively connected with a commutator segment, wherein counter electrodes of the capacitor elements are provided on an underside of the ring disk, which is located opposite the upper side of the ring disk, and wherein a single underlying counter

electrode layer is provided that underlies and almost covers the electrode layers so that the counter electrodes of all capacitor elements have the same potential.

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
